Subject:
Sand casted main cover on Minex, 8101

Dear Distributor,

As one step to improve our delivery situation, with the purpose to come back to normal lead times of pumps, Grindex has decided to implement a sand casted main cover on Minex, 8101.

The main cover used so far has been die casted, and is seen to the left in the picture below.

The sand casted main cover will have a very similar design to the die casted cover, but the surface roughness will be slightly rougher and a marking "770 38 00" will be visible on the sand casted design, as seen in the picture above.

The Grindex part number 51 782 00 remains unchanged for both designs.

Both the sand casted and the die casted main covers will be in production in parallel.

Pumps concerned

Minex, 8101

Time for change

Sand casted main covers will be implemented in the end of January 2018.
