Subject PumpSelect updated to version 2.1			www.grindex.com

Dear Distributor,

PumpSelect has been updated from version 2.0 to version 2.1.

You can download the new version from: www.grindex.com/pumpselect where you can also find the Installation Instructions and a practical User's Manual.

The layout of PumpSelect has not changed much but it has been updated with the most recent product specifications and curves and has been extended to include more pump models such as Tuff, Bravo and Tubo.

We trust the new software will continue to be an even more useful assistant for your pump selections.

Please do not hesitate to contact us with further questions, suggestions or bug-reports.

Yours sincerely,

Ola Hällgren
Technical Manager
